

WhelanVIEW Virtual Security Officer Solutions

Whelan can deploy innovative technology tools to our security officers and security managers on our virtual WhelanVIEW platform. This platform allows our officers to capture and report critical information from the field while supervisors can track their exact locations. This presents our clients with an extraordinary “view” into their security operations. Being alerted electronically of incidents and events in the field within seconds of their occurrence provides the distinct advantage of being able to mitigate security issues in a timely and efficient manner.

V-Post (System)

V-Post An interactive guard post management system used for valuable information sharing between security officers, supervisors, managers and customers.

V-Tracker (Devices)

V-Tracker A hand-held portable device designed to effectively monitor security officer operations, including post order delivery, incident reporting, guard tour verifications, quality of service verifications, voice communications, and GPS tracking.

V-Logistics & V-Inspector (Applications)

V-Logistics A mobile app designed to improve the efficiency and effectiveness of logistics such as property inspections, compliance data, delivery track/reporting, and more.

V-Inspector A mobile app allowing field inspections and quality assurance reporting. Designed to assess and improve the effectiveness of security operations.

Officers can quickly and easily scan locations, complete reports, make calls, and use GPS maps.
